

Connecting all Indians

India is a country with a billion minds that are united with the spirit of creativity and domestic diversity. A country that speaks more than 100 languages needs to be the forefront of connectivity.

In that spirit, the government of India has committed itself to the noble initiative of connecting all Indians through the Internet by 2025, thus facilitating the ease of doing business. Our nation is moving towards bridging gap between different stakeholders and the government to prevail over complexed issues.

The internet is a core and functional part of the individual's existence in the 21st century, particularly in context of the pandemic. The ability to transact, communicate and perform various functions effectively over the internet are the characteristics of universal access. Thus, enhancing these characteristics and creating synergies - increasing ease of use and availability, primarily through technical interventions, thus playing the role of the gateway to the next billion Internet users.

The topic of connecting all Indians shall focus on highlighting the meaningful connectivity and bandwidth for all. Discussions shall focus on the Role of Global Internet Governance in ensuring right Bandwidth for all and How India aims to efficiently provide bandwidth and last mile connectivity to every corner of the country. How India can utilize modern day technologies such as IoT, Blockchain and AI to enhance economic productivity and bring India together as a nation to achieve greater heights.
